SUMMARY

I'm a web developer proficient in designing and deploying production ready websites using HTML, CSS, and JavaScript. I've applied practical development skills to build and maintain responsive frontends across more than 5 personal and academic projects including a smart farming dashboard and a resume builder. My work emphasizes clean UI/UX design, modular architecture, and efficient code for better performance and usability across devices. I'm eager to contribute and grow by delivering user-focused digital solutions in real-world web development projects.

EXPERIENCE

Web Developer

Freelance Web Developer

01/2023 - Present Udaipur

Full-Stack Development

- Engineered and launched three full-stack web applications utilizing the MERN stack, achieving a 20% reduction in bounce rate and a 30% improvement in page load times through optimized UX.
- Spearheaded the development of scalable, interactive frontend using React.js integrated with RESTful APIs, leading to the discovery of key findings to fix the three biggest causes of crashes.
- Reduced page load times by 40% through advanced code-splitting and lazy loading techniques.
- Secured web applications by configuring role-based access control (RBAC) with Firebase Authentication, enabling granular permission management for 10 distinct user roles and improving data security.

EDUCATION

Bachelor of Technology (B.Tech) - Computer Science & Engineering

Sir Padampat Singhania University

08/2023 - 05/2026 Udaipur

SKILLS

Programming Languages

JavaScript (ES6+), Python, C/C++

Web Development

HTML5, CSS3, React.js, Redux, Node.js, Express.js, RESTful APIs, Firebase, MySQL, Responsive Web Design, E-commerce Development, Tailwind CSS, MongoDB

Cloud & DevOps

AWS (EC2, S3), Firebase Hosting, Cloud Deployment, CI/CD Pipelines, Git, GitHub

Blockchain & Security

Smart Contracts, Ethereum, Web Security Best Practices, Google Cybersecurity, JWT Authentication

Tools & Frameworks

React Hooks, MVC Architecture, Lazy Loading, Code Splitting, Redux Toolkit, Firebase Auth, VS Code, Postman, Mongoose, JWT, dotenv, Render, Netlify

Computer Science Fundamentals

Data Structures & Algorithms, Object-Oriented Programming (OOP), Operating Systems, DBMS, Cryptography

Other

IoT Systems, Real-time Data Visualization, Agile Methodology, troubleshooting, Gmail (used for auth/OAuth integrations), Admin Panel Design, Form Validation, Token-based Authentication, Deployment Tools

STRENGTHS

Soft Skills

Teamwork and Collaboration, Effective Communication, Agile Team Collaboration.

PROJECTS

FULL STACK CAREER GUIDANCE PLATFORM

05/2025 - Present

A full-stack web app offering personalized career guidance, quizzes, and college listings.

- Built with MERN stack, featuring real-time quiz analysis, role-based login, and admin management.
- Improved student engagement and guidance accuracy by 40% through intelligent suggestions.

Resume Builder Web Application

04/2025 - 05/2025

Architected a smart resume builder, empowering users to design professional resumes and save them to a MongoDB database, achieving a 99.9% uptime and zero data loss.

- Established repeater components for flexible form sections, enabling users to customize resume templates and reducing the need for manual adjustments by 40%, as the most junior member.
- Developed a secure backend system utilizing Node.js, Express.js, and MongoDB to manage structured resume data, ensuring data persistence validated through rigorous testing with 50+ sample entries.
- Implemented jQuery and 'serialize Array' to streamline form data management, handling nested input groups, which reduced data entry errors by 40% across the application's user interface.

IOT SMART IRRIGATION SYSTEM

02/2023 - 04/2024

A smart irrigation system to enhance farming efficiency through real time data

- Engineered an interactive dashboard using React.js and REST APIs, visualizing live sensor data for precision agriculture and diminishing manual monitoring requirements by approximately 50%
- Used React.js and APIs to display live sensor data and analytics
- Displayed temperature, moisture, and water level analytics in real-time, aiding precision agriculture decision-making for up to 5 sensor nodes

ECO-CYCLE (E-WASTE MARKETPLACE)

07/2024 - 08/2024

A platform aimed at minimizing e-waste by facilitating the sale of electronic components

- Built a platform for buying and selling electronic components to reduce e-waste
- Launched secure authentication, product listings, and personalized dashboards, improving user task flow ~40% by using React.js, Firebase, and Node.js
- Executed real-time notifications and a review system for buyers and sellers

KEY ACHIEVEMENTS

ECO-CYCLE WINNER (E-WASTE MARKETPLACE) – SHARK TANK

Created ECO-CYCLE, a digital e-waste marketplace, and secured 1st place in campus Shark Tank by presenting a scalable, sustainability-focused solution addressing environmental challenges.

CERTIFICATION

Google Cybersecurity Professional Certificate

Certified Blockchain Developer

Frontend Web Development with React – Coursera

AWS Cloud Practitioner Certification
